

# **Lifting Module Basic**

# Max. lifting force 1,000 N, stroke from 200 to 600 mm, manual-hydraulic version

# **Advantages**

Description

plunger cylinder.

ments.

Operation

return spring.

- Elegant and slim design
- Optimised ergonomics
- Simple operation
- No coupling stroke required
- Working in ergonomically optimum height

The stroke movement is obtained by a hydraulic

linear unit with single-lever actuation with oil be-

ing pumped by means of a piston pump into a

For lowering the oil returns by the weight of the

The lifting units are ideal for height adjustment of

tables, demonstration objects and similar equip-

ments as well as for medical treatment equip-

To lift the load, the foot pedal has to be

depressed by approx. 45° several times. The

pedal returns to its off-position by means of a

For a stroke of 100 mm 8 pump motions are re-

To descend the load, the foot pedal has to be

load from the cylinder back to the reservoir.

# moduhub

# Lifting module

Part no. 891001 X0H

### **Technical characteristics**

Max. lifting force: 1,000 N Max. torque: 100 Nm

Stroke: 200 up to 600 mm

# **Operations**

Foot pedal

# Combinable with the modules

• Rotating module - horizontal axis DMH 200 as per data sheet M 1.101

 Tilting module KMB 100 as per data sheet M 2.101

• Rotating module - vertical axis DMV 600 as per data sheet M 1.301

 Cart modules WMS as per data sheet M 5.101

 Floor modules FMS as per data sheet M 6.101

# moduhub interfaces

Top plate: 140 x 140 - Ø 10.5 mm Bottom plate 200 x 200 - Ø 10.5 mm

## Accessories

• Base and adaptor plates as per data sheet M 8.100 and M 8.110

• Table plates as per data sheet M 8.130

## **Application**

Lifting module for ergonomic design of working places.

# Principal use

- Industrial assembly working places
- Height adjustment of assembly working places in workshops
- Maintenance works
- Assembly fixtures
- Adjusting systems in supply processes of mid-sized objects
- Handling systems for product packing and transfer

# Fixing and installation

For fixing of modulub modules or other components of the user at the top plate the lifting module has an interface 140 x 140.

For fixing of *modulub* modules at the bottom plate the lifting module has an interface 200 x 200.

If the lifting module has to be fixed on a flat level floor, 4 screws M10 of property class 10.9 as well as heavy-duty plugs have to be used.

For increased stability also a base plate, which Top and bottom plate: aluminium, can be delivered as accessory, can be fixed at the bottom plate.

# **Material**

Lifting profile: aluminium,

moved upwards by approx. 10°.

naturally anodised

black anodised

# **Technical Characteristics Dimensions**

#### **Technical characteristics** A+Stroke Weight Stroke Α [mm] [mm] [mm] [kg] 200 420 620 9.5 820 10 300 520 400 620 1020 11.5 500 720 1220 13 600 820 1420 14.5

## Important notes

To descend the lifting module a minimum load of approx. 200 N is required.

The lifting module must only be pressure loaded. The centre of gravity should be within the traverse of the fixing screws.

If the centre of gravity is outside, the dowelled joint with the floor has to be dimensioned correspondingly. In such cases it is recommended to use a larger base plate.

In case of eccentric load of more than 250 mm, the column cannot descend automatically because of too high friction forces.

The lifting module is designed for applications within closed rooms.

# Code for part numbers

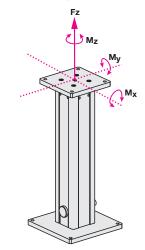

891001 X0 H Part no.

#### Stroke

- **2** = 200 mm
- 3 = 300 mm
- 4 = 400 mm
- 5 = 500 mm

6 = 600 mm

#### Maximum lifting force and maximum **Dimensions** admissible torque load

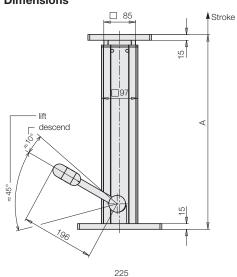

Maximum lifting force Fz: 1,000 N

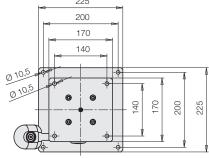

Maximum torque load:

Total Mx/y: 100 Nm Mz: 50 Nm

In the case of eccentric loads, it is recommended to compensate these by counterweights. In off-position the indicated maximum torques may occur.

The forces and torques have to be considered by the operator. During the lifting motion only 50% of the maximum values are admitted.
